Hello Everyone!

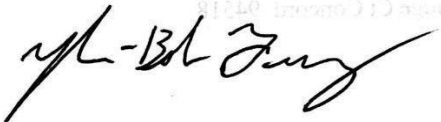

When I performed George Gershwin's "Porgy and Bess: A Symphonic Picture" with the New England Conservatory's Symphonic Orchestra as the Tenor Saxophonist, the elation was intoxicating. Like programmers, we operate in a fast-paced, high-intensity environment collaboratively and individually to create quality work. I experimented with different techniques resulting in fully functional features while using new technologies to put a creative spin. As someone who has juggled between entertainment, military, nonprofit organizations, and more, my experiences reinforce my ability to build trust with my peers, develop skills that test my limits, and utilize new techniques in my own way as an Engineer.

While developing my full-stack application, I wanted to implement an unfamiliar technology (to me) to polish my work, add new skills to my repertoire, and to create a new feature. I researched practical applications of Postman, UI/UX, and APIs ranging from tutorials and documentations along with guidance from cohort mates and mentors. After two weeks, I created a web app that helps people personalize and adapt music/video playlists to their likings and search from Youtube via Youtube Data API v3.

When I saw this position, I realized that I would be surrounded by a variety of professions. This will allow me to see how this organization functions as a whole and take what I have learned to find avenues for growth.

I look forward to arranging a meeting with you to discuss more about my background and this position!

Very Respectfully,

A handwritten signature in black ink, appearing to read 'Yuh-Boh Feng', with a stylized flourish at the end.

Yuh-Boh Feng MM, PMP, CSM
